

Infinigate Infrastructure as a Service

Many Infrastructure as a Service offerings require customers to deploy their own security provisions, increasing costs and complexity. With Infinigate, you can overcome this challenge by leasing infrastructure in our secure and fully managed environment. This means you can start small with a specific customer, or in a specific location, and scale your infrastructure over time, safe in the knowledge that your operations and data are always protected.

With Infrastructure as a Service offerings from some of the leading public cloud providers, you may be responsible for deploying, maintaining, and updating security solutions to protect your end customers apps and data. This significantly increases costs and complexity for your business and, in some cases, makes delivering certain services for your customers cost prohibitive.

Infinigate Infrastructure as a service is designed to help you overcome these barriers to success. Instead of purely leasing infrastructure, we provide a fully secured, fully managed hypervisor where you can place one or more virtual machines on behalf of your customers, running the key applications and services they need.

This means you can focus on delivering services for your end customers, and leave the infrastructure management and security to us.

What is Infrastructure as a Service from Infinigate?

Infinigate Infrastructure as a Service includes:

- 1 A hypervisor environment where you can locate one or more virtual machines**
With a fully OPEX billing model to ensure that your service proposition for your end customers is profitable and that pricing is fully transparent
- 2 End to end security and management for your customers' infrastructure and services**
With firewalls and other security infrastructure delivered by Infinigate in the cloud and maintained and updated on an ongoing basis by our expert teams
- 3 An enterprise class, fully compliant datacentre environment**
Based on certification to all the relevant industry standards, including ISO 27001 and 9001

Guaranteed uptime for your customers' mission-critical services

Infinigate Infrastructure as a Service provides a **99% availability SLA**, ensuring that you can deliver the best service experiences for your customers.

The unique value of Infinigate's Infrastructure as a Service

Our Infrastructure as a Service stands apart from competing offerings in the marketplace in a number of key ways:

- 1 Start as small as you wish – starting with a single virtual machine**
With Infinigate, it becomes possible to start delivering services for customers with a single virtual machine, with virtually unlimited scalability to grow your business in the future. This is possible due to our security and management wrap, which means you can deploy VMs in our already secure, compliant environment, without the cost of deploying and managing these systems from scratch.
- 2 Focus 100% on growing your business**
The fact that Infinigate manages security and maintenance for your infrastructure on an ongoing basis means that your internal teams can focus 100% of their effort on new business activities, rather than routine IT maintenance.
- 3 Serve customers across Europe**
Infinigate has true, pan-European reach with Infrastructure as a Service available in the UK, Benelux, Germany, and all other areas of Europe.
- 4 We have proven cybersecurity experience over more than 4 decades**
Infinigate has been involved in the cybersecurity industry for 45 years, and has closely monitored the constantly shifting threat landscape during this time. Our experience of configuring, deploying and managing multiple generations of cybersecurity solutions ensures that our Infrastructure as a Service solutions offer the best possible protection for your customers' critical apps and data.
