

# Azure Security Review

## Overview

Infinigate Cloud's Security Review offers to help you and your customer gain visibility of their existing Azure configuration and outstanding security recommendations. This can help to formulate a plan for improvement, a roadmap for deployment of security enhancements and additional features, and even migration of additional services into Azure.

## What does the service do?

There are three different outputs associated with this service, Secure Score Review, Comprehensive Review and Security Workshop.

- Secure Score Review includes commentary on the current security score plus a summary of the top 5 most impactful security controls. Recommendations will be provided on how to improve it.
- Comprehensive Review expands on the Secure Score Review by looking at all the security controls, beyond the top five. Traffic light style reports are created for each primary Azure resource that is deployed as well as for the most important Azure AD/tenant configuration settings and includes best practices recommendations and suggestions for improvement where applicable.
- Security Workshop includes all the features of the Comprehensive Review, plus meetings with stakeholders to discuss topics such as business goals, security goals and pain points. There is also opportunity for discussions and demos around available Azure security products and features. All findings will be written up into a report.

## Who is this service for?

Businesses who are wishing to improve Azure security or are concerned that their environment has not been built to best practises and will therefore become vulnerable to attack.

Service	Secure Score Review	Comprehensive Review	Security Workshop
Security Score and Controls	Top 5 only	All	All
Reports	✓ Basic only	✓ Traffic Light Style	✓
Improvement and Best Practice Recommendations	✓ Top 5 Only	✓	✓
Security Strategy and Demos	✗	✓	✓
